Introduction **5**

1 School Mental Health Services **6**

Policy Recommendations:

- Improve the ratios of school counselors, school social workers, and school psychologists..... 7
- Expand the school mental health workforce pipeline.....12
- Implement school telemental health programs 18
- Facilitate school-linked mental health services.....21

2 Financing **25**

Policy Recommendation:

- Extend Medicaid to cover school-based mental health services.....26

3 Prevention and Early Intervention **30**

Policy Recommendations:

- Promote skills for life success.....31
- Increase suicide prevention awareness and training33
- Require mental health education 36
- Permit excused absences for mental health..... 38
- Provide annual mental health screenings.....41
- Provide access to mental health services without a formal diagnosis..... 44

Appendix A: Comprehensive School Mental Health Systems **45**

Appendix B: Parents and Students Support for School-Based Mental Health Services **46**

Notes **48**

Introduction

Mental health challenges among children and youth are rising. In 2021, more than 40% of high school students felt persistently sad or hopeless and more than 20% seriously considered attempting suicide.¹ When youth struggle with their mental health, it can affect their education, their relationships with their teachers, parents, family, and friends, and even their health and safety.

Fortunately, prevention and early intervention work. The earlier youth get help, the better the outcomes. One of the best ways to help youth get help early is to provide mental health supports where they are—in school. To support youth, legislators across the country and across the aisle are increasingly making school mental health a top priority.

This school mental health state legislative guide is intended to provide legislators with practical policy recommendations that support student mental health, with examples of recently passed legislation, in three categories:

- **School Mental Health Services**
- **Financing**
- **Prevention and Early Intervention**

The Hopeful Futures Campaign is grateful to the many state legislators who have championed school mental health legislation, some of which is featured in this guide, and welcome the opportunity to partner with legislators who are interested in advancing school mental health policy in their own state.

“It’s high time we start putting mental health in schools at the forefront. By taking simple steps, ...we can set the example for how American schools should provide for their students.”

Izzie House

*A junior at East High School in Denver, CO,
The Colorado Sun²*

1

School Mental Health Services

The mental health challenges facing youth are so pervasive that the American Academy of Pediatrics, the American Academy of Child and Adolescent Psychiatry, and the Children’s Hospital Association declared a national emergency in 2021.

Data from the Center for Disease Control & Prevention (CDC) shows that 42% of high school students reported persistent feelings of sadness or hopelessness and noted “significant increases in the percentage of youth who seriously considered suicide, made a suicide plan, and attempted suicide.”³

One of the best ways to get children the help they need is to provide mental health support where they are—in school. School-based mental health services reduce barriers to care such as transportation and parents needing to take time off from work. School-based mental health services also normalize mental health care, reduce stigma, and minimize inequities - particularly for low-income families and historically underserved students. Yet, despite the need for school mental health services, **six in 10 public schools (61%) report insufficient mental health staff to manage caseloads.**⁴

Policy Recommendations

To increase the availability of mental health services for students, states are encouraged to:

- **Improve the ratios of school counselors, school social workers, and school psychologists**
- **Expand the school mental health workforce pipeline**
- **Implement school telemental health programs**
- **Facilitate school-linked mental health services**

Recommended policies, including examples of recent legislation, are discussed in more detail in the following pages.

POLICY RECOMMENDATION

Improve the ratios of school counselors, school social workers, and school psychologists

School counselors:

1:250

School social workers:

1:250

School psychologists:

1:500

School counselors, school social workers, school psychologists, and other school health professionals are the cornerstone of comprehensive school mental health systems. The ratio of students to school mental health professionals is a signal of schools' ability to provide the supports that help students succeed academically and in life. States should strive to meet the following nationally recommended ratios of school mental health professionals to students:

- School counselors - 1:250⁵
- School social workers - 1:250⁶
- School psychologists - 1:500⁷

1

School Mental Health Services

LEGISLATIVE HIGHLIGHT

Georgia

Passed: [HB19 \(2023\)](#) General Appropriations bill for FY23-24

Champions: Reps. Jon Burns (R), Jan Jones (R), Chuck Efstration (R), Matt Hatchett (R), Sen. Blake Tillery (R)

Summary: This budget invested \$26.9 million to increase the number of school counselors to serve Georgia's approximately 1.7 million K-12 student population.

[Learn more about Georgia's mental health victory.](#)

LEGISLATIVE HIGHLIGHT

Delaware

Passed: [HB 300 \(2022\)](#) "School Mental Health Professionals for grades 6-8"
[HB 100 \(2021\)](#) "School Mental Health Professionals for grades K-5"

Champion: Speaker Valerie Longhurst (D)

Summary: These two bills improve the ratios of school mental health professionals for grades K-8 over three years as follows:

- 1 full-time equivalent (FTE) school counselor, school social worker, or licensed clinical social worker per 250 students
- 1 FTE school psychologist per 700 students.

[Read Delaware's Bay to Bay New Guest Commentary: At last, Delaware's kids are getting the mental health support they deserve.](#)

POLICY
RECOMMENDATIONExpand the school mental health
workforce pipeline

[Ashley, a mother, posts about why it's important to have adults checking in with students at school.](#)

As states seek to increase school mental health professionals to meet student needs, they may be hampered by mental health workforce shortages. These workforce shortages present a significant barrier to care. To address these challenges, many states are implementing a range of initiatives, including:

- **Interstate compacts**
- **Loan repayment programs**
- **Modified supervision and/or internship requirements**
- **Outreach and recruitment programs**
- **Stipends or scholarships for students entering school mental health professions**
- **Professional license and credentialing fee subsidies**

LEGISLATIVE HIGHLIGHT

Colorado

Passed: [SB23-004](#) Employment of School Mental Health Professionals

Champions: Sen. Janice Marchman (D), Sen. Sonya Jaquez Lewis (D), Rep. Dafna Michaelson Jenet (D), Rep. Mary Young (D)

Summary: This legislation allows employment of licensed mental health professionals to provide services in schools without requiring a special license from the Department of Education. School-based providers must pass a background check and be supervised by someone licensed through the Department of Education or a licensed administrator.

LEGISLATIVE HIGHLIGHT

Nevada

Passed: [AB37](#) “Behavioral Health Workforce Development Center of Nevada”

Champions: Assembly Committee on Education

Summary: This legislation authorizes the Board of Regents of the University of Nevada to establish the Behavioral Health Workforce Development Center of Nevada and to accept gifts, grants, and donations to support the Center, which must consist of:

1. a main hub located at an institution within the University of Nevada system; and
2. regional hubs in each of the five behavioral health regions.

The Center is required to develop and implement a strategic plan for the recruitment, education, and retention of a qualified, diverse, and evolving behavioral health workforce in Nevada. The legislation provides approximately \$2 million for personnel and operating expenses.

1

School Mental Health Services

POLICY RECOMMENDATION

Implement school telemental health programs

Only 17% of schools offered telemental health services during the 2021 school year.⁹

Telemental health provides an opportunity to increase access to mental health services and supports in schools that lack adequate in-school resources. In rural and underserved communities, in particular, telemental health programs can reduce disparities in access to care. Telemental health is also valuable in reducing the time students spend away from class and reduces transportation challenges and the need for parents and guardians to take time away from work. Finally, telemental health can provide access to providers with specialized expertise, such as with eating disorders, and providers that may better meet the needs of students and families.

LEGISLATIVE HIGHLIGHT

Texas

Passed: [SB 11 \(2019\) Child Psychiatry Access Network and Telemedicine and Telehealth Programs](#)

Champions: Sen. Larry Taylor (R), Reps. Greg Bonnen (R), Dan Huberty (R), William Metcalf (R), Shawn Thierry (D), Four Price (R)

Summary: This legislation required the [Texas Child Mental Health Care Consortium](#) to establish telemental health programs for at-risk children and youth. The Texas Child Health Access Through Telemedicine (TCHAT) program supports local school districts in identifying and assessing mental health needs and providing access to services.

	PRIMARY SPONSOR(S) Sens. Christine Rolfes (D), June Robinson (D), Joe Nguyen (D)	
BILL DESCRIPTION Bill Text (Section 509 and 510(3)) Provides \$500,000 annually for two years for education service districts to provide telemental health services to students in rural areas.		

**POLICY
RECOMMENDATION**

Facilitate school-linked mental health services

School-linked services remove barriers to access to mental health services for students – especially underinsured and uninsured students – and in mental health provider shortage areas.

Partnerships between community mental health providers and school systems provide another pathway to support student mental health needs. These partnerships typically provide on-campus services but are termed “school-linked” because the providers are not school employees. By leveraging existing community resources, school-linked mental health services can offer a solution where there are shortages of school-based mental health professionals. Additionally, school-linked services may be able to provide complementary services and supports that enhance existing school-based mental health services.

LEGISLATIVE HIGHLIGHT

California

Passed: SB 75 (2019) Mental Health Student Services Act

Champions: Senate Committee on Budget and Fiscal Review

Summary: The Mental Health Student Services Act (MHSSA) allocated \$40 million to provide competitive grants for school-county mental health partnerships. These partnerships provide school-based services to children, youth, and their families. Subsequently, the Budget Act of 2021 provided an additional \$95 million to fund applicants and, in a third phase, \$100 million of American Rescue Plan Act (ARPA) funds were provided to establish 20 additional counties in establishing a MHSSA program.

School Mental Health Services

EXAMPLES OF RECENT LEGISLATION

> Facilitating school-linked mental health services *(Continued)*

VIRGINIA

BILL TITLE Public education bill	BILL NUMBER SB 1043 (2023)	BILL STATUS Enacted Mar 2023
	PRIMARY SPONSOR(S) Sens. Jeremy McPike (D), Barbara Favola (D)	
BILL DESCRIPTION Bill Text (Section 22.1-272.2) Requires development of a model memorandum of understanding between a school board and a community mental health provider.		

Financing

With youth mental health challenges continuing to rise, 69% of public schools reported an increase in the percentage of students seeking school mental health services.¹⁰

In the face of this growing demand, **nearly half of public schools (47%) report that inadequate funding limits their efforts to provide mental health services to students in need.¹¹**

Medicaid can play an important role in helping meet this demand for school mental health services by bringing federal matching funds that help state and local dollars go further. Many state Medicaid programs cover school mental health services, including telehealth, for all Medicaid-enrolled students, but **over half of states limit coverage to students on an Individualized Education Plan (IEP).**

Additionally, some states are leaving federal dollars on the table because their Medicaid programs do not include coverage of school-based mental health professionals or services.

Policy Recommendation

To provide more diversified and sustainable funding for school-based mental health services, states are encouraged to:

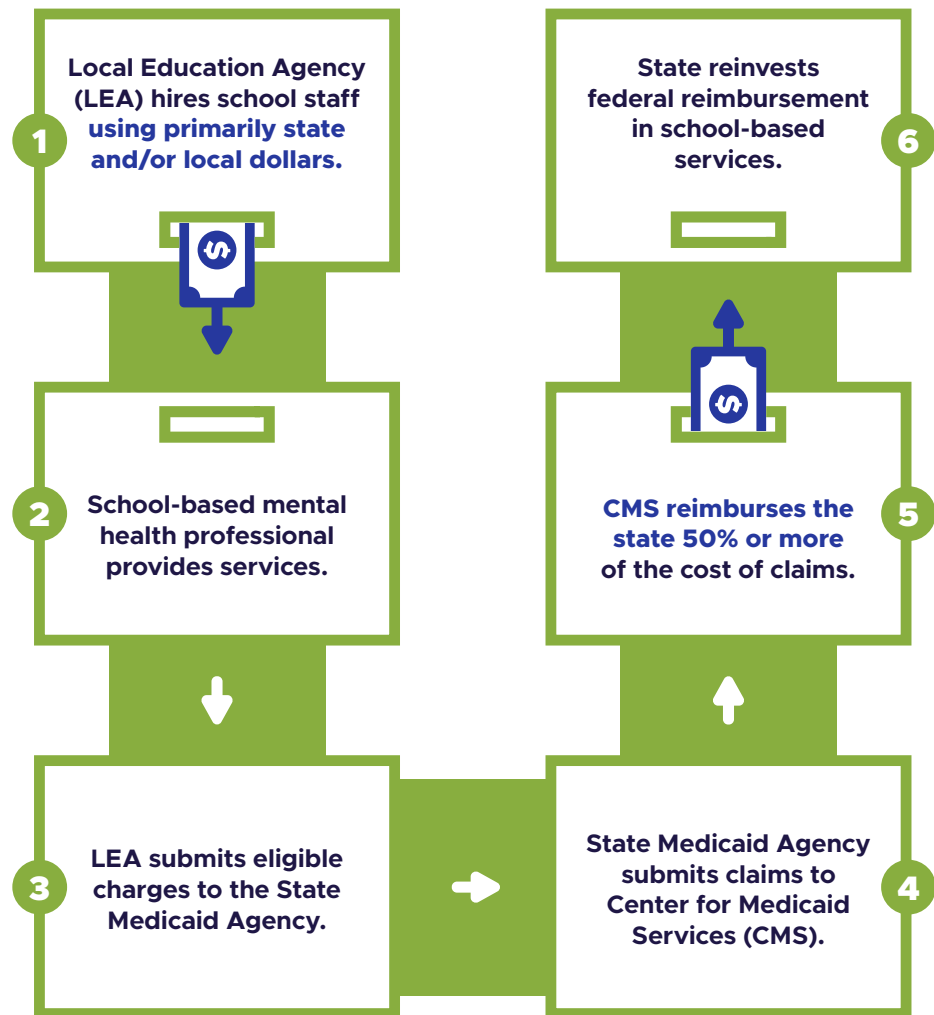

➤ **Extend Medicaid to cover school-based mental health services**

The recommended policy, including examples of recent legislation, is discussed in more detail in the following pages.

Federal School Medicaid Reimbursement

This graphic illustrates how states can receive federal funding for school-based mental health services.

Permitting Medicaid coverage of school-based mental health services typically does not require state general fund investments. In fact, Medicaid coverage should result in increased federal revenue to reinvest in mental health services.

POLICY
RECOMMENDATION

**Extending Medicaid to cover school-based
mental health services**

21 states

have extended their school Medicaid programs to cover more services:

- Arizona**
- Arkansas**
- California**
- Colorado**
- Connecticut**
- Florida**
- Georgia**
- Illinois**
- Kentucky**
- Louisiana**
- Massachusetts**
- Michigan**
- Minnesota**
- Missouri**
- Nebraska**
- Nevada**
- New Hampshire**
- New Mexico**
- North Carolina**
- Oregon**
- South Carolina**

Since 1988, Medicaid has reimbursed states for medical services provided in a school-based setting for students with an Individualized Education Program (IEP). In 2014, the Center for Medicare and Medicaid Services (CMS) clarified that states can also be reimbursed for eligible services provided to all Medicaid-enrolled students. Currently 21 states have done so.¹²

New federal guidance, released in May 2023, gives states additional flexibility in implementing school Medicaid programs. According to a Healthy Schools Campaign Brief:

Expanding billing for more students could mean more federal revenue to the state and more reimbursement to districts. And since most schools already deliver some of these services (and pay for them with education dollars), bringing in federal reimbursement can replace scarce education money and help stretch resources further.¹³

Prevention and Early Intervention

Half of all mental disorders begin by age 14 and 75% by age 24.¹⁴ Fortunately, prevention and early intervention work.

Research shows that the earlier a person gets effective mental health treatment, the better the outcomes. In addition, research shows there are an array of supports and services that promote children’s mental health and well-being and, at the same time, reduce the likelihood or severity of future mental health challenges.

Schools are a natural setting for providing an environment and practices that promote mental health and observing early signs of students who may be at risk. In schools that have adopted the “Multi-Tiered Systems of Support,” or MTSS framework (see [Appendix A](#)), these are known as Tier 1 interventions.¹⁵

In addition to mental health promotion, there is also a need to ensure early intervention for youth. For example, a youth that has experienced a trauma, such as a school shooting, may be struggling. There is benefit if they can get help early—before challenges rise to the level of meeting criteria for a formal mental health diagnosis. With the right policies, states can support resiliency and mental wellness and help youth stay safe, healthy, and happy.

Policy Recommendations

To support mental health prevention and early intervention, states are encouraged to:

- **Promote skills for life success**
- **Increase suicide prevention awareness and training**
- **Require mental health education**
- **Permit excused absences for mental health**
- **Provide annual mental health screenings**
- **Provide access to mental health services without a formal diagnosis**

Recommended policies, including examples of recent legislation, are discussed in more detail on the following pages.

POLICY RECOMMENDATION

Promote skills for life success

[See a post by Tiffany about how her 7-year-old daughter taught her how to manage stress.](#)

Skills for life success¹⁶ are key competencies, such as relationship skills, self-management, responsible decision-making, self-awareness, and social awareness, that affect students' success in school and life and contribute to mental wellness. Multiple studies, including in the *American Journal of Public Health*, have found that social-emotional skills have strong associations with young adult outcomes across multiple areas, including academic achievement and mental health.¹⁷

Life skills are recognized as essential to succeeding not just at school, but also at work. An AEI/Brookings report, *Opportunity, Responsibility, and Security*, recommends that education promotes social-emotional as well as academic skills and notes that these skills have a significant influence on people's educational attainment, employment, and earnings.¹⁸

POLICY
RECOMMENDATION

Increase suicide prevention awareness
and training

42% of high school students reported feeling persistently sad or hopeless in the past year.

Every day, youth experience mental health, substance use, and suicidal crises. The Centers for Disease Control and Prevention (CDC) reports that, in 2021, over four in 10 (42%) high school students reported feeling persistently sad or hopeless in the past year, and one in 10 (10%) made at least one suicide attempt.¹⁹ In addition, emergency department visits for suspected suicide attempts were 50.6% higher among girls ages 12-17 than during the previous year.²⁰ For youth ages 10-14 years old, suicide is the second leading cause of death.²¹

To address alarming rates of suicide, states should adopt comprehensive policies and programs. An excellent resource is the [“Model School District Policy on Suicide Prevention: Model Language, Commentary, and Resources,”](#)²² which is endorsed by the American Foundation for Suicide Prevention, American School Counselor Association, National Association of School Psychologists, and The Trevor Project.

LEGISLATIVE HIGHLIGHT

Vermont

- Passed:** [H481 \(2023\)](#) “An Act to Address Death by Suicide”

Requires development and dissemination of informational materials and a social media campaign relating to the 988-crisis hotline, including appropriate information for students at K-12 schools.

3

Prevention and Early Intervention

POLICY RECOMMENDATION

Require mental health education

According to a 2020 Harris poll, **70% of teenagers said, “I wish I learned more about mental health and coping mechanisms in school.”**²⁶

Mental health education increases awareness and understanding of mental health conditions, including signs and symptoms, treatment, and support options. Research shows that mental health literacy also reduces stigma and increases positive attitudes toward mental health.²³ When states require mental health as part of the standard school curriculum, it serves to normalize mental health as part of overall health and helps ensure that students will receive developmentally appropriate information. The “[Strengthening Youth Mental Health: A Governor’s Playbook](#),” released in July 2023, includes mental health education as a policy recommendation to increase awareness and reduce stigma.²⁴

In 2018, New York passed the first legislation requiring mental health to be part of elementary, middle, and high school health education. Today, 20 states have similar legislation.²⁵

LEGISLATIVE HIGHLIGHT

Utah

Passed: [SB 171 \(2022\)](#) Behavioral Health Curriculum Program

Champions: Sen. Daniel Thatcher (R), Rep. Steve Eliason (R)

Summary: This legislation requires the Huntsman Mental Health Institute and the State Board of Education to develop an age-appropriate youth mental health curriculum, which is to be updated annually, and made available to elementary and secondary schools, parents and guardians, and youth-serving organizations.

3

Prevention and Early Intervention

POLICY RECOMMENDATION

Permit excused absences for mental health

[Read why more students and parents are calling for mental health days.](#)

Students are routinely allowed excused absences when they need the time or care to heal from an illness or injury. Similarly, students should have the opportunity for excused absences when they are mentally unwell, struggling, or receiving treatment for a mental health challenge. According to the National Alliance on Mental Illness:

School policies that recognize mental health symptoms and treatment as an acceptable reason for absence can help students take the time they need to care for themselves, restore their health and help minimize additional symptoms.²⁷

In 2019, Oregon and Virginia became the first states to explicitly allow excused absences for students' mental health. Today, over a dozen states have passed similar legislation.²⁸

LEGISLATIVE HIGHLIGHT

Delaware

Passed: [HB 3 \(2023\) "School Attendance"](#)

Champions: Speaker Valerie Longhurst (D), Sen. Laura Sturgeon (D)

Summary: Permits excused absences for mental health; allows school districts to determine the maximum number of excused absences allowable; requires referral to a school-based or behavioral mental health specialist after the second and subsequent mental health excused absences.

BILL NUMBER

[HB 1834 \(2022\)](#)

BILL STATUS

Enacted Mar 2022

PRIMARY SPONSOR(S)

Reps. Lisa Callan (D), Skyler Rude (R)

BILL DESCRIPTION

[Bill Text](#)

Requires adoption of rules that establish that an absence for a mental health reason is categorized as an excused absence due to illness, health condition, or medical appointment.

POLICY
RECOMMENDATION

Provide annual mental health screenings

See how screenings can help parents know how to best help their children.

Regular mental wellness checks can help identify students who may need additional support before any challenges develop or worsen. Early intervention is essential to helping students thrive. According to the Centers for Disease Control and Prevention (CDC), approximately **20% of students show signs and symptoms of a mental health disorder each year and nearly two in five youth will meet criteria for a mental health condition by age 18.**²⁹

Well-being checks, or mental health screenings, should use an evidence-based tool or process to screen all students, not just those at risk, for possible mental health challenges. According to the National Center for School Mental Health, screening measures may also be used to ask students about indications of well-being and positive mental health, life satisfaction, school belonging, social determinants of mental health, and adverse early life experiences.

LEGISLATIVE HIGHLIGHT

Louisiana

Passed: HB 353 (2023) Student Behavior, Discipline, and Behavioral and Mental Health

Champions: Reps. C. Denise Marcelle (D), Alonzo Knox (D)

Summary: This legislation requires the Department of Education to develop a pilot program in three school systems to implement trauma-informed mental health screenings and provide related mental health services.

3

Prevention and Early Intervention

POLICY RECOMMENDATION

Provide access to Medicaid youth mental health services without a formal diagnosis

27 states do not require a diagnosis for ages 0-6. This is necessary for all youth.

As more and more youth experience mental health challenges, including mental health traumas, there is a compelling need to provide help early. Removing a requirement of a formal mental health diagnosis is an important policy step to reduce barriers to youth getting the mental health services they need before their challenges become more severe. This policy change not only increases the ability of mental health providers to intervene early, but it can also reduce the fear of stigma and discrimination attached to diagnostic labels.

EXAMPLE OF RECENT LEGISLATION

> Providing access to Medicaid youth mental health services without a formal diagnosis

Reps. Meghan Lukens (D), Ty Winter (R)

BILL DESCRIPTION

[Bill Text \(Section 1. 25.5-1-133\)](#)

Allows Medicaid enrollees under the age of 21 to receive limited mental health services without requiring a diagnosis.

Comprehensive School Mental Health Systems

One of the most effective approaches to get youth the help they need is to meet them where they're at—in schools. Comprehensive school mental health systems play a vital role in normalizing mental health care and reducing barriers to treatment, especially for students who are underserved, and work in partnership with youth, families, and communities to provide multi-tiered systems of support (MTSS).³⁰

Multi-Tiered Systems of Support

TIER 1

Universal mental health promotion (all students)

Includes healthy school climate policies and initiatives, mental health education and training, well-being checks, and skills for life success, such as self-management, responsible decision-making, and relationship skills.

TIER 2

Early identification and intervention (students at risk for mental health concerns)

Includes assessment for behavioral health challenges and plans of support, individual counseling, small group interventions, and connections to community resources and services.

TIER 3

Intensive treatment and supports (students with greater needs)

Includes more intensive treatment and supports, such as individual or family therapy, medications, or team-based interventions that are often provided through school-linked mental health services (outside professionals or clinics who provide services in the school) or connections to community providers.

Appendix B: Parents and Students Support for School Mental Health Services

Parents and Students Support for School-Based Mental Health Services

Mental health supports in schools, where youth spend so many of their waking hours, are critical to giving every child in America a chance for a hopeful and healthy future. School-based services are vital because half of all mental health conditions emerge by age 14, and suicide is the second leading cause of death for children ages 10-14. In addition, youth are six times more likely to complete treatment provided in schools compared to other community settings.³¹

Overwhelmingly, parents want schools to be a place for their children to access mental health services.

Four in 10 parents are very or extremely worried their child might struggle with anxiety or depression.³²

88% of parents support schools providing resources and services to support student mental health³³

76% of parents support providing more mental health professionals in schools³⁴

Most students want more help for mental health at school.

Eight in 10 teens (81%) say mental health is a significant issue for young people.³⁵ Since the start of the pandemic, 70% of schools reported an increase in students seeking mental health services in schools.³⁶

76% of teens say their school should offer more outlets for students struggling with mental health³⁷

70% wish they had learned more about mental health and coping mechanisms in school³⁸

Appendix B: Parents and Students Support for School Mental Health Services

Promoting Parent Partnerships

Parents are paramount in ensuring that their children are healthy, happy, and safe. Schools share those aims and support parents by carrying out a myriad of functions to promote students' health, happiness, and safety. However, requiring parents to opt-in before a student is screened or receives assistance can have unintended and detrimental consequences by disrupting life-saving preventive screenings and jeopardizing children who are the victims of abuse.

**There is a simple solution.
Provide parents notification and
an opportunity to *opt-out*.**

Delivering services (screenings, assessments, counseling, etc.) under an opt-out model increases the likelihood of student participation while preserving parental choice. With so many children hurting and in distress, we need supportive policies that allow schools and parents to work together to provide all children with a hopeful future.
